

6.3.2 Does your university as a body have processes to prevent polluted water entering the water system, including pollution caused by accidents and incidents at the university?

Qassim Water Treatment

<https://wetico.com/?project=qassim-university> [1]

Apart from the supplied water treatment plant & pump station. The sewage treatment plant of average capacity equals to 5250 m³/d & can be extended to a maximum capacity up to 13125 m³/d. It consists mainly of two treatment streams, each stream of 2625 m³/d capacity; using a very convenient treatment method called RBC (Rotating Biological Contractors).

The wastewater treatment plant is designed to treat the wastewater that coming from the different facilities inside the university. Suspended solids and biodegradable organic matter are reduced through the treatment system to the acceptable limit for irrigation.

Treating Water
